PERCONTAINER GUARD PCG-500

Today, containers have become indispensable in the transport of general cargo. In fact, more and more goods are shipped or stored in containers. Every day, thousands of containers are opened for unloading or inspecting of cargo. Thus the opening and closing of container doors are operations that are performed countless times. Unfortunately, whilst opening containers a lot of small and big accidents occur daily.

Has the freight been secured properly? Is the cargo leaning against the doors? Are the doors under stress? Questions which the person who has to open the container cannot possibly answer.

Did you know?

The most common injuries when opening containers are bruises, grazes and cuts, followed by fractures, internal traumas and sprains. The majority of these are injuries to the head.

Now there is a solution:

At the request of the port of Antwerp, PERCON has developed a special tool to avoid these unsafe situations and to reduce the risk of accidents :

the **PERCONTainer guard 500 (PCG500)**

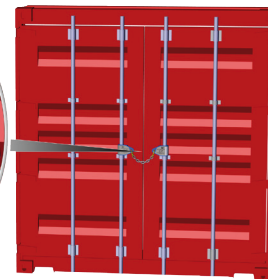

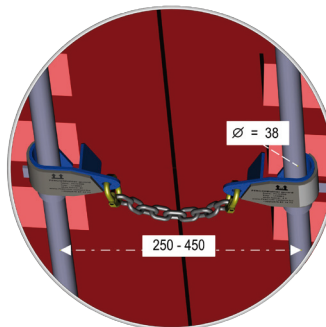

The strengths of the PERCONTainer Guard in short:

- Composed of various high-grade types of steel
- Low weight (<4 kg)
- Can be fastened quickly and without preparation
- Calculated and inspected by external agencies for a traction force of 50.000 N
- Designed for the standard ISO freight containers / EN 12079
- 100% recyclable and designed in accordance with the cradle to cradle principle

With the **PCG500** you have a strong product, made out of sturdy steel, yet easy to handle thanks to the low weight of less than 4 kg.

**In short: are you looking for a solution to safely open container doors?
Are you looking for an alternative that saves time when opening cargo containers?
Are you looking for a certified and proven solution for container inspection?**
